EXECUTIVE FOREWORD & WELCOME

Dr. Mariam A. Abdulmalik
Chair of Conference Organizing Committee
Managing Director – PHCC

Amidst a world that has faced global pandemics, epidemics, climate disintegration and natural disasters, wars and human suffering PHCC yet again, through its series of international conferences, is shedding the light on primary health care as the cornerstone of humankind health and wellbeing.

With the success of the past edition of the Primary Health Conference in Doha held in 2020, PHCC/Qatar is delighted to announce the “5th International Conference on Primary Health-care to be held from 9-12 November 2023 in Doha. The conference is organized under the theme Primary Care Today: Lessons Learnt, Future Action for Sustainability”.

In line with PHCC strategy and global strategies, this high-level event embraces a variety of topics and methods that include cutting-edge research findings, innovations, integrated strategies, and peoples centered approaches for improving healthcare delivery, panel discussions, workshops, and keynote presentations. Each designed to deepen the understanding of primary health care and its transformative impact on communities.

As the world emerges from the adversities of Covid -19, the conference grants a special focus on building back better by learning from success stories, challenges, innovative solutions, and best practices to face a world with rising health obstacles, related climate change issues and natural disasters. All adversely affecting people’s health systems.

As we embark on this four-day journey, let us remember that primary health care is not just a profession. It is an obligation and a calling that requires both up to date knowledge, empathy, dedication, and relentless pursuit of excellence.

The details of an enlightening journey, that awaits you over the next few days, is presented through the pages of this booklet which provides you with comprehensive information about the conference, its objectives, the wealth of knowledge-sharing opportunities, in addition to background information about Primary Health Care Corporation in Qatar.

Our speakers and presenters, comprising renowned experts and thought leaders in the field, are poised to inspire and educate. Their insights will ignite discussions, foster collaborations, and share with us experiences, lessons learned, forecasts, and the tools necessary to address the pressing challenges facing primary healthcare today and tomorrow.

Thank you for joining us at the Primary Health Care Conference 2023. Let us embark on this educational journey together, with the shared goal of advancing primary healthcare and improving the well-being of all individuals and families.

EXECUTIVE FOREWORD & WELCOME

Dr. Zelaikha AlWahedi

Chair of Conference Scientific Committee
Assistant Managing Director
Quality & Workforce Development– PHCC

I am pleased to have you join for the 5th International Primary Health Care Conference which is organized by Primary Health Care Corporation, Qatar.

Undoubtedly, in recent years, in Qatar and elsewhere, we have witnessed remarkable advancements in primary health care that deserve recognition and celebration. Progress in research, technological innovations such as building digital platforms, telemedicine, and digital consultations, have revolutionized the way health services are delivered.

In PHCC Qatar, we work tirelessly to pursue these advancements which have not only improved access to healthcare, but they have also enhanced the efficiency and effectiveness of healthcare service delivery to all.

The integration of data analytics, encouragement and support to scientific research and integration of relevant technological advances into our primary health care has led to more personalized and evidence-based treatments.

This data-driven and people centered strategy transformed patient outcomes, ensuring that the right interventions are timely, ultimately saving lives and reducing healthcare costs.

Evidently, investing in primary health care is one that yields great dividends for the prosperity and future of our societies. In terms of numbers, studies have shown that countries with strong primary health care systems experience better health outcomes, increased life expectancy, and higher levels of economic productivity.

While we celebrate these advancements, we must also learn from previous hurdles and acknowledge the challenges that lie ahead. Ongoing global health crises have exposed the vulnerabilities in our healthcare systems, emphasizing the need for stronger primary health care infrastructure with preventive measures, timely health services and scientific research to be at the top of the agenda.

In 2023, our conference, under the theme “Primary Care Today: Lessons Learnt, Future Action for Sustainability” focuses on topics that are timely and urgent especially at a time when we need to recover from the impact of years of global suffering from the effects of COVID-19 and disasters.

Through a diverse array of 6 workshops and 30 sessions, the conference agenda facilitates key topics such as, healthcare resilience during global crises, models of care and innovations, clinical practice updates, quality improvement and capacity building, as well as specialized topics in infectious disease, mental health and scientific advancements.

To meet its vision of becoming the leader and add value in transforming the health and well-being of people’s lives in Qatar, PHCC research team diligently support and promote a vast research agenda related to advancement in primary health care.

I believe that together, by promoting the application of research evidence in developing and implementing interventions, health policies and strategies, we can alleviate Primary Health Care to higher levels of quality and performance.

At the end of my remarks, I would like to extend my gratitude to the members of the IPHCC 2023 Scientific Committee for unmatched efforts and dedication. Also, I would like to convey appreciation for the strong support by the planning committee as well as to the speakers and facilitators for their valuable time and contributions.

EXECUTIVE FOREWORD & WELCOME

Mrs. Huda AlWahedi

Chair of Conference Logistic Committee
Executive Director of Corporate Communication
PHCC

As mentioned by PHCC leadership, Dr Mariam, Abdul Malik, “As we face new and emerging health threats, such as pandemics and climate change-related health issues, primary health care must adapt and innovate to meet the changing needs of our population”.

Today, in times of changing global dynamics, persistent health challenges, tough socioeconomic situations, and natural disasters, it's an honor to be here among all of those joining in the, timely, 5th International Primary Health Care Conference to contribute to a topic of utmost significance: Primary Health Care.

In an era marked by cutting edge technological advancements and interconnectedness, effective communication has developed, in the sphere of PHC, as a vital aspect of building resilient and efficient healthcare systems.

As primary health care, is the starting point for individuals seeking healthcare assistance, it is evident that its success rests in the power of deploying effective communication tools for engaging a wider audience and achieving better results. Evidently, good communication is at the core of all good medical care, no matter where you are.

In the context of PHCC Qatar, communication for better health is a two-way street: it involves conveying medical information and listening to patients' needs, and perspectives. Our role is pivotal in publishing results and utilizing evidence for behavior change towards better health and wellbeing. For that purpose, we position key principles for effective communication.

Firstly, comes building and sharing of information, which is a key pillar that we always need to ensure is active, dynamic, engaging, and multi-directional.

Another key principle is the deployment of relevant and simple communication channels and tools. Medical language can be frightening and confusing for patients. As effective communicators, we translate complex medical terminology into plain and understandable language; multiple languages and formats enhances accessibility and inclusivity.

A key communication principle that we also uphold is empathy and active listening. We provide support and empowerment to ensure active listening to patients, understand their emotions, and validate their needs. We create a nurturing environment that encourages open dialogue and shared decision-making.

Another central principle is building our theory of change, on evidence and raising awareness amongst our patients and visitors as a fundamental approach. Improving health literacy is critical for empower patients to take charge of their health. and make informed health-related choices.

Furthermore, embracing and mixing between innovative technologies, advancement in media and communications that includes both digitalized and traditional media channels, helps us reach a broader audience and engage with patients in diverse ways.

As effective communicators, we play a crucial role in fostering clear, concise, and respectful interactions among various healthcare professionals, thus enhancing patient outcomes and overall teamwork.

Let us strive together to foster a healthcare ecosystem where every individual feels heard, respected, and supported in their pursuit of better health. Thank you for your attention and looking forward to enriching discussions during this conference.

ABOUT CONFERENCE & CONFERENCE OBJECTIVES

About The Conference

The 4-day event honors progress and embrace the future of primary healthcare. It will provide a platform to share knowledge, facilitate forums to discuss best practices and underline Qatar's legacy of promoting health and wellness by providing excellence in primary healthcare.

The conference brings together inspiring speakers and experts from across the globe to share knowledge and best practices through panel sessions, exhibitions, and workshops. The conference also showcases research applicable to improvements in primary health care by providing the opportunity for researchers to share their research not only with PHCC but the wider academic and healthcare community.

Conference Objectives

- Reflect on innovative health management systems and quality improvement initiatives for improved health outcomes and patient safety in primary care
- Identify up-to-date and evidence-based diagnostic and therapeutic management options for common illnesses in primary health care settings
- Recognize family and community-centered international best practices in health promotion and disease prevention
- Compare approaches to health professions education, workforce training and capacity building in the primary care practice
- Recognize the importance of and opportunities for research in primary care for improved population health outcomes

CONFERENCE WORKSHOP

CONFERENCE WORKSHOP

PHC Clinical Pearls

Aims:

In today's rapidly changing world, it is vital for physicians to stay updated with current medical knowledge. A key method for achieving this is through regular review of concise and self-contained clinical pearls shared by expert healthcare professionals in the literature and at conferences. Clinical pearls are derived from experience or observations, rooted in patient-centered care, and possess applicability to other patients.

In our workshop, you will explore multiple complex real-life cases representing examples of the most common clinical problems encountered in primary care in Qatar, enabling you to gain clinical reasoning and judgement in a simple practical way. Using a self-directed learning approach, you will have the full power to select and engage with cases actively and understand the most important clinical pearls associated with each case. By the workshop's end, you will have gained a comprehensive understanding of clinical pearls in primary care practice, their significant contribution to your continuous professional development, and be motivated to integrate this tool into your lifelong learning journey.

Learning Objectives:

1. Recognize clinical pearls as concise, self-contained information derived from experience or observations, relevant to patient-centered care.
2. Explore real-life cases to identify significant clinical pearls in some of the most common presenting problems in PHCC in Qatar.
3. Develop autonomy in self-directed learning by selecting and analyzing cases.
4. Comprehend how clinical pearls contribute to professional development and lifelong learning.
5. Encourage sharing

Target audience :

30-35 max. participants

Family Medicine physicians, residents, and general practitioners

CONFERENCE WORKSHOP

Quality Improvement and Patient Safety : To deliver best quality care through value improvement

Aims:

Apply Value Improvement to achieve High Quality Healthcare and Joy in Work

Learning Objectives:

By the end of this workshop, participants will be able to:

- Recognize the importance of strategic approach to Value improvement.
- Understand the principles of Value Improvement
- Apply value improvement methodologies locally to optimize the quality of patient care.
- Identify the 3 components of Value Improvement methodology
- Develop practical skills on Quality Improvement tools for Value Improvement to achieve transformational results
- Learn how to implement Joy in Work in the workplace and Explore innovative approaches to enhance job satisfaction and reduce burnout among healthcare professionals

Target audience

Leaders, Mid-Managers, frontline teams

Non- clinical staff

Business managers from finance and support services

Approaching of Common Emergency Problem in PHCC

Aims:

Highlights on two common emergencies in PHCC

Learning Objectives:

Early recognition and management of sever and life-threatening allergic reactions

When and how to apply back slab casts for ankle sprains injuries

Target audience

Physicians, nurses and paramedics

Diabetic Foot Care for Primary Healthcare Professional

Aims:

This workshop is a joint effort between HMC & PHCC delivering an evidence -based approach to the management of diabetic foot issues. It will look into the pathophysiology of Diabetic foot, diabetic neuropathy, Charcot foot, osteomyelitis, Classification of diabetic foot ulcers , offloading and managing various issues related of diabetic foot including skin infection ,fungal and nail pathology along with arterial and vascular components . Various modalities of treatments shall be discussed with an emphasis on what conditions can be treated at PHC level and what a should be referred to secondary care. This workshop will deliver a hand on experience with live cases and various tools used in the assessment and treatment of diabetic foot conditions.

Learning Objectives:

1. Attain knowledge , skills and expertise in: Stratifying at risk patients. Managing diabetic foot ulcers. , Diagnosing osteomyelitis with early recognition & or timely referral, Learning the techniques of offloading ,Wound bed management / preparation, Critically analyzing different dressing materials i.e. foams, alginate, hydro gels etc. ,Ability to classify ulcers according to Wegner's & PEDIS system.
2. Critically analyse factors contributing to the morbidity & mortality associated with diabetic foot ulcer / amputation.
3. Demonstrate the ability to assess various stages of diabetic foot ulceration, perform vascular assessment using hand held doppler ,measurement of ankle brachial pressure index measurement, ability to utilize an infrared temperature device, monofilament, 128 KHZ tuning fork and neuro thesiometer.
4. Ability to recognize different wounds / ulcers whether neuropathic, ischemic or combined.
- 5.addressing the major advantages / disadvantages of the different major types of wound / ulcer dressings and demonstrating appropriate selection of addressing for a specific patient.
- 6 Ability to diagnose osteomyelitis & Charcot arthropathy utilizing roentgen's films and clinically.
7. Proposing appropriate antimicrobial / anti mycotic treatment for different conditions including cellulitis, Tinea pedis , infected ulcers , onychomycosis , Tinea rubrum , pseudomonas infections & MRSA .
- 8.Apply a holistic approach in managing the whole patient rather than the hole in the patient i.e. metabolic control, psychological wellbeing & family support with proposing preventive foot care practices.
9. Ability to carry out an initial comprehensive diabetic foot assessment and on a continuous basis.
10. Critically analyze the management options, including debridement, offloading, infection control & dressing materials.
11. Describe the role of adjuvant therapies in treatment of diabetic foot ulcers.

CONFERENCE WORKSHOP

Ethical Dilemma in Medical Practice

Aims:

To provide participants with a basic understanding of ethical decision making in medical practice, their significance, and the impact they have on patient care and provider well-being.

Learning Objectives:

By the end of this session, participants will be able to:

1. Recognize the ethical principles and frameworks that guide ethical decision-making.
2. Reflect on personal experiences and insights related to medical ethical concerns.
3. Identify common ethical concerns faced by primary healthcare providers and recipients.
4. Analyze case studies to understand the application of ethical decision-making frameworks

Target audience

Primary healthcare providers, including physicians, nurses, and allied health professionals, medical students, residents.

The art of publication

Aims:

This workshop aims to increase your chances of successful publication through exploring strategies for impactful manuscript preparation and journal selection

Learning Objectives:

- Know how to prepare the different sections of a manuscript in order to effectively communicate scientific ideas.
- Understand important evaluation criteria for journal selection.
- Understand the peer-review process from an editorial perspective.

Target audience

CONFERENCE PARTNER & SPONSORS

CONFERENCE PARTNER

وزارة الصحة العامة
Ministry of Public Health
دولة قطر • State of Qatar

Ministry of Public Health

Qatar has established a robust world-class health system centered around the importance of universal health coverage for all members of society.

The Ministry of Public Health (MOPH) is working in cooperation with its partners to enhance the health system in Qatar and achieve the desired progress to achieve the Qatar National Vision 2030 goal: A Healthy Population: Physically and Mentally, through a strong and comprehensive health care system according to the best international standards.

The health sector has witnessed significant development, as the Ministry of Public Health and health sector institutions have made key achievements to achieve better health for the population, and at the same time the MOPH is working to improve the health of the Qatari society, fulfill the needs of citizens quantitatively and qualitatively, and upgrade its services to the highest international levels, in consistent with the national strategies.

- The health sector has paid attention to the development of health services and technologies to ensure that all members of society receive state-of-the-art care that meets all their health needs.

The health sector has made significant achievements at the national, regional and international levels. These achievements include the State of Qatar's international recognition for excellence in public health; improvements in performance, operations, and quality; advancements in patient safety and engagement programs, strategic planning for the future; expanding health facilities to accommodate population growth; better organization of appointments, enhanced health insurance; and successful partnership programs between the health sector and the private sector.

The Ministry of Public Health, in collaboration with its partners, has enhanced e-health services, which facilitated the link between different public health facilities through electronic systems for easy access to patient records in all health facilities, in addition to providing telemedicine services.

The health sector in the State of Qatar seeks continuous development by focusing on projects that improve health services and contribute to enhancing the health of Qatar population, whether these projects complement the projects of the 2nd National Health Strategy or new projects.

CONFERENCE PARTNER

Hamad Medical Corporation

Hamad Medical Corporation (HMC) is the main provider of secondary and tertiary healthcare in Qatar and one of the leading hospital providers in the Middle East. For more than four decades, HMC has been dedicated to delivering the safest, most effective and compassionate care to all its patients.

HMC manages fifteen specialist hospitals as well as the National Ambulance Service, mental health, homecare and residential care services.

HMC's transformation over the past decade is unparalleled around the world. Since 2016, HMC has opened eight new hospitals and a range of new specialist facilities – further strengthening Qatar's public sector hospital network.

Thirteen HMC hospitals hold corporate Academic Medical Center accreditation by the Joint Commission International, endorsing the quality and safety of services, while the Ambulance Service, Home Healthcare Service, Stroke Service and Palliative Care Service have all received prestigious JCI accreditation.

HMC is committed to delivering healthcare services on par with the world's best and many of our services exceed international benchmarks for quality of care, including stroke, cardiology, trauma and cancer.

In 2023, HMC had four hospitals ranked among the world's top 250 academic medical centers, with two achieving top 100 ranking; highlighting our commitment to combining patient care, medical research and education to achieve the best outcomes and experience for our patients.

HMC is leading the development of the region's first academic health system – combining innovative research, top-class education and excellent clinical care – and is committed to building a legacy of healthcare expertise in Qatar.

HMC was also the first hospital system in the Middle East to achieve institutional accreditation from the Accreditation Council of Graduate Medical Education – International (ACGME-I), which demonstrates excellence in the way medical graduates are trained through residency, internship and fellowship programs.

ABOUT QATAR

Qatar, officially State of Qatar, is an independent country since September 3rd, 1971. Qatar is a constitutional monarchy ruled by Al Thani Family since last century.

EMIR OF QATAR IS: H.H. SHEIKH TAMIM BIN HAMAD AL THANI.

Qatar is a peninsula located halfway down the west coast of the Arabian Gulf with capital in Doha City. The total land area is approximately 11,521 square km with moderate desert climate of long hot summers and short mild winters. Major towns active in economy development are Doha, Al Wakrah, newly growing Lusail, Dukkha, Al Shamal, and Mesaieed. Economically, country has one of the world's largest natural gas and oil reserves. Qatar's population is currently more than 2.6million and its number still increase. Qatar is one of the most conservative societies in the Gulf Cooperation Council (GCC). It is very important for you to learn more about culture of Qatar, what duties and responsibilities you have as a resident of the State.

Arabic is the official language and English is commonly used as a second language. In 2012, Qatar became a member of French-speaking organization, La Francophonie.

HEALTH SECTOR IN QATAR

The Health sector in Qatar has made great strides to provide service to meet and, in many areas, to exceed international best practice standards by providing high quality services, the most advanced medical equipment and highly qualified, competent health professionals. The Health services extended to cover the entire country with hospitals and health centers.

The Ministry of Public Health is the highest authority of health care affairs in the country and with the same is regulatory authority for the health sector.

Across the whole country there are many health care providers recognized as public and private. Public Health Care is majority, named Primary Health Care Corporation and Hamad Medical Corporation that is providing secondary health services.

Every resident of State of Qatar should apply for the Health Card that will allow you to use medical services within the country.

Qatar National Vision 2030 (QNV) was launched by the government in 2008. It is the Country's long-term development national strategy which defines goals and provides a framework for the implementation plans. The QNV reflects the aspirations of the Qatari people and the resolve of their political leadership. It is found upon the guiding principles of Qatar's Permanent Constitution, which pronounces that "the State shall foster public health; provide means of prevention from diseases and epidemics, and their cure in accordance with the law"

The QNV “aspires to develop an integrated system for health care, managed according to world-class standards. This system will meet the needs of existing and future generations. It will provide for an increasingly healthy and lengthy life for all citizens. All health services will be accessible to the entire population”

National Health Strategy (NHS) was launched in 2011. The NHS outlines in greater details the health care vision within the QNV. The NHS has focus on the importance of shifting the balance of care “to effectively deliver and integrated model of services for the country. Qatar’s health sector must shift the balance of care toward a preventive and community based model of care anchored around capable a trusted primary care”

“A Healthier Future for Our Families”

The Qatar Primary Health Care Strategy Plan (2019-2023) sets for five-year strategic plan which is driven by our strong commitment to PHCC Vision, Mission and Values.

According to NHS Program PHCC becomes Foundation for the Primary Care to successfully achieve the modernization of the health care system.

The scale of change needed for this to happen is significant. Making all these improvements in care services happen will require changes behind the scenes, such as the establishment of electronic health records, expansion and refurbishments of primary health care facilities. Among all, the most important enabler is people. The potential of the existing staff must be continuously maximized with new ways of working and comprehensive trainings.

The National Strategy contains 64 recommendations which will be implemented as per model of services development. Making the organizational and operational changes described in these action plans is the critical success factor for all staff working in the Corporation in the journey to achieving a World Class Primary Health Care service for all people in Qatar.

ABOUT PHCC

Primary Health Care Corporation is dedicated to provide the publics of Qatar with the highest level of health care by operating and managing a different Health Centers across the State of Qatar

VISION

To be the leader in transforming the health and wellbeing of people's lives in Qatar.

MISSION

To deliver comprehensive, integrated and coordinated person-centered health care services in the community through focusing on disease prevention, healthy lifestyles and wellness. In partnership with our stakeholders, we will improve the health and wellbeing of our population

GOALS

Building on the success of the National Primary Health Care Strategy, and aligned to the goals of the NHS 2018-2022 and triple aim framework of better health, better care and better value. PHCC's strategic plan comprises six key priority goals on delivering success in the following areas:

- High Quality, Integrated Family Medicine Model of Care
- Focus on Preventative Health
- Highly Skilled and Motivated Workforce
- Enhanced Primary Care System and Collaboration for High Quality Care and Patient Safety
- Strong Partnership with Patients, Families and Communities
- Effective, Innovative Organisations

VALUES

Our values are the fundamental guiding principles of our organization, they enable us to operate as an elite organization, create a great working environment, and support a capable and empowered workforce to provide the best possible care and support for people and families.

The Top 5 Values Are:

- Efficiency and Quality
- Leadership and Collaboration
- Inclusion and Diversity
- Teamwork and Respect
- Empowerment
